EXPERIENCE

DASSAULT SYSTÈMES | SOFTWARE ENGINEER

Vélizy-Villacoublay, 01/2022 – 10/2025

Development and maintenance of user interface components intended for internal technical teams, aiming to harmonize and optimize development tools.

- Design and implementation of user interface components based on specifications gathered from clients and UX teams.
- Corrective and evolutive maintenance of existing components to ensure tool reliability and performance. Development in Javascript, Typescript and C++.
- Writing technical documentation to facilitate the integration and use of components by other development teams.
- Active participation in Agile Scrum methodology rituals to organize the development cycle and deliver features iteratively.

DASSAULT SYSTEMES | SOFTWARE ENGINEERING INTERN

Vélizy-Villacoublay, 04/2021 – 09/2021

Development of advanced interaction solutions for virtual reality environments within an industrial software platform. As a software engineer, the goal was to improve the user experience and the extensibility of the existing system.

- Design and specification of new interaction methods dedicated to virtual reality interfaces.
- Development of robust software modules in C++ while respecting a clear and extensible software architecture.
- Design and exposure of APIs allowing client developers to extend the infrastructure's features.
- Integration within a team following the Agile Scrum methodology to ensure development tracking and incremental delivery.

INSTITUT DE PREVENTION ET DE GESTION DES RISQUES URBAINS | STAGIAIRE DEVELOPPEUR UNITY

Marseille, 06/2020 – 07/2020

Development and optimization of an urban risk simulator, specifically a flood modeling tool within a museum. Role as a Unity developer to improve the accuracy of physical simulations and the performance of the rendering engine.

- Improvement of the flood simulation system by replacing static surfaces with dynamic physical simulation in C#.
- Implementation of the marching cubes technique for realistic and fluid water rendering.
- Performance optimization via a preliminary study and progressive integration of the Job System and ECS (Entity Component System).
- Debugging and maintenance of the source code to ensure simulator stability.

FIDUCIAL CLOUD | STAGIAIRE DEVELOPPEUR FULL-STACK

Aix-en-Provence, 04/2018 – 06/2018

Development of features for an open-source project management tool within a cloud infrastructure. Role as a full-stack developer to improve planning capabilities and data integration.

- Improvement of the open-source project management tool's features.
- Development and maintenance of the planning module using PHP.
- Design of scripts for extracting and processing data from internal databases.

DIPLOMA

FACULTE DES SCIENCES MARSEILLE LUMINY | MASTER'S DEGREE IN COMPUTER SCIENCE

Marseille, 2021

Geometry and Computer Graphics

FACULTE DES SCIENCES MARSEILLE LUMINY | BACHELOR'S DEGREE IN COMPUTER SCIENCE

Marseille, 2019

User interface and 3D modelisation

IUT D'AIX-EN-PROVENCE | TWO-YEAR UNIVERSITY DEGREE IN TECHNOLOGY (DUT) IN COMPUTER SCIENCE

Aix-en-Provence, 2018

SKILLS

- Javascript
- Typescript
- HTML5
- CSS3
- SASS
- React
- SQL
- MySQL
- Unity
- C#
- C++ 20
- Qt
- Github

LANGUAGES

- Français – native language
- Anglais – technical, written and spoken
